

DEVELOPER TECHNICAL TEST

Requirements

- Analyse APIs and Swagger documentation at <https://petstore.swagger.io/>
- Develop a console application to execute the required PetStore API(s) and return available Pets from the Pet Store
- Print a list of available Pets to the console sorted in Categories and displayed in reverse order by Name

Instructions

- Don't spend too long on the exercise, it doesn't have to be perfectly polished!
- Write at least one unit test for your code
- Include a Readme.md file
- It is recommended to use ChatGPT to write some of the code (include the ChatGPT transcript in your Readme)
- Document further steps that you would take to ensure that your application is fit for the enterprise
- Share the code with us via GitHub or as a zip file – GitHub is preferred
- We will review internally and discuss together in the next interview in the form of a "code walkthrough"
